♦ Students and Information Technology in Higher Education Daytona Beach Campus (2009)

♦ Daytona Beach Campus

The ECAR Study of Undergraduate Students and Information Technology was developed in 2004 by EDUCAUSE, a nonprofit association whose mission is to advance higher education by promoting the intelligent use of information technology. The survey is administered annually to undergraduate students at four-year colleges and universities nationwide.

The survey seeks to gather data from first-year and senior level students in order to provide information on undergraduate students' use of, preferences, and expectations for information technology. Students are asked about the technology they own and how they use it in and out of their academic world. Information is also gathered about how skilled students believe they are with technologies; how they perceive technology is affecting their learning experience; and their preferences for IT in courses.

The 2009 study also includes a special focus on student ownership and use of Internet-capable handheld devices.

EDUCAUSE administered the 2009 Study of Undergraduate Students and Information Technology to all first year and senior students at the Daytona Beach campus. Of the 2,470 first year and senior students enrolled in the Spring 2009 term, 326 (13%) were completed. ERAU has participated since 2007.

♦ The Students

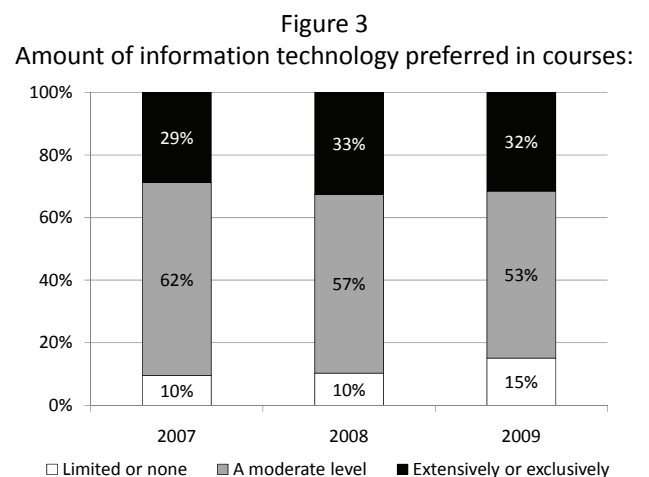

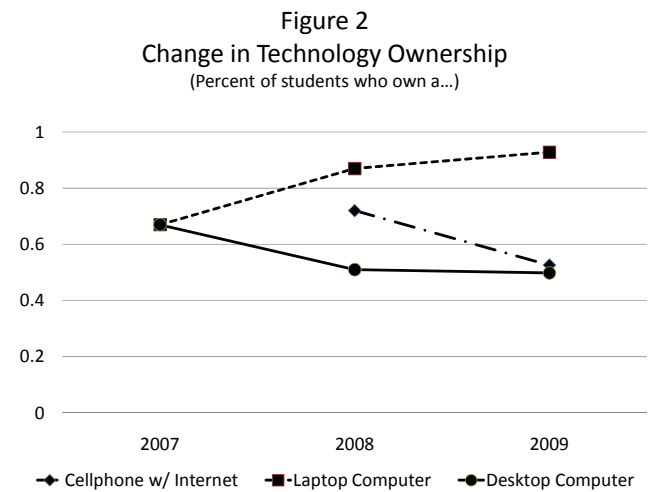

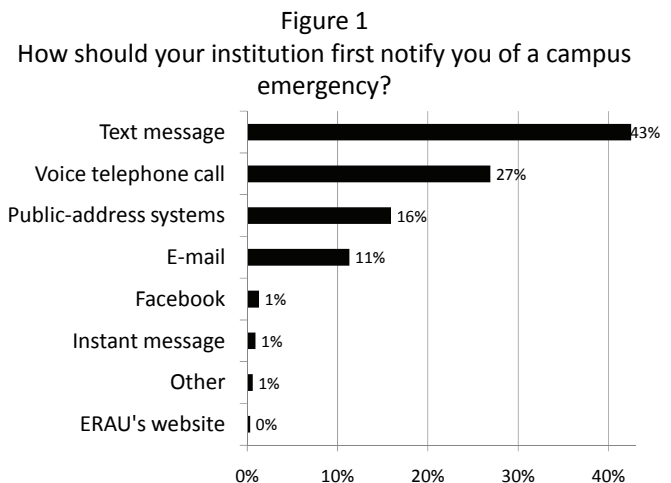

Figure 4

Information Technology Skills (Percent responding 'Expert' or 'Very Skilled')

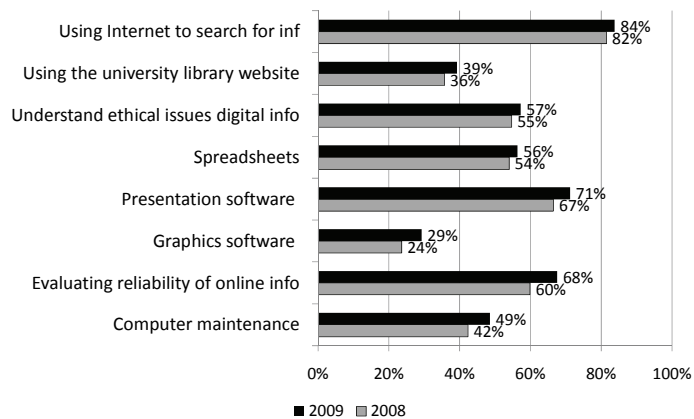

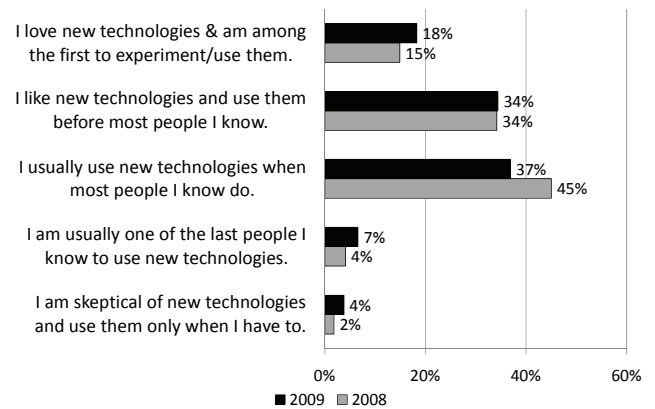

Figure 5

Which of the following best describes you?

◆ Information Technology and Learning

Figure 6

I like to learn through:

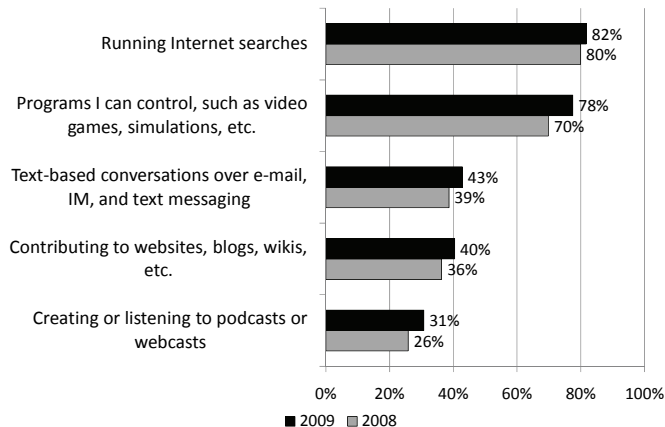

Figure 7

Information Technology in Courses (Percent responding 'strongly agree' or 'agree')
