Competence of Graduates from Other Institutions at General Skills	
By Campus (B-27 through B-31)	63

INTRODUCTION TO DATA TABLES

In the following data tables there are two types of percentages: Row % and Col %. Row % is the percentage of the row that answered a question a certain way, i.e. the total of the row is 100%. Col % stands for column percent. This is the percentage of the column that answered a question a certain way, i.e. the total of the column is 100%. The number of respondents has not been weighted and represents the actual number of people who responded. The percentages have been weighted based upon the employers of the class of 1999 graduates who responded to the Employer Feedback Survey. Percentages are the weighted percent of those who responded. For example, if four employers responded to a question, and three selected one option and one selected another, the unweighted percentages would be 75% and 25%, respectively. However, since the data has been weighted to reflect the actual population instead of only the respondents, the weighted percentages may in fact be 77% and 23%. Due to rounding, minor numeric inconsistencies exist and some totals may not equal exactly 100%.

Caution must be used in examining statistics based on small sample sizes because the results may not generalize to the population. In order to preserve confidentiality, results for subgroups with less than three respondents are not provided. However, if there were a sufficient number of respondents when combining results of the employers of the class of 1998 and employers of the class of 1999 graduates together, then those statistics are included in the major profile addendum.

EMPLOYER AND JOB CHARACTERISTICS
